INDEX TO THE GENUS CAREX

OF GRAY'S MANUAL

BY JOS. F. JAMES, CUSTODIAN, CIN. SOC. NAT. HIST.

The following Index to the Genus *Carex* embraces all the species and varieties, and the synonymy of the same, as given in the last edition of Gray's Manual. A few are added from the first edition of the same. In it has been incorporated all the latest changes in nomenclature at present accessible. In the first columns are placed all the species with their varieties, arranged in alphabetical order, and numbered to correspond with the numbers of the Manual. Opposite to each species of the first column, are placed in the second, all the synonyms, and opposite each synonym of the first column is placed in the second the species. All have numbers corresponding to the Manual. All the synonyms are in *italics*, and all the species are in ordinary type:
